DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Rai et al. (U.S. Patent No. 6,421,714 B1/ or "Rai" hereinafter).

Regarding claims 1-13, Rai discloses a system and a method for allowing a mobile of a wireless communication, referred to as a mobile node (MN) or simply a mobile station (Figs. 1 & 2, and col. 1/lines 15-64; col. 2/line 40 to col. 3/line 18), simultaneously access to multiple data networks coupled to the wireless communication network, for example, a wireless or mobile

Page 3

Art Unit: 2684

network 30 comprises an ISDN system as a data network system and other data network systems such as the ISP or internet service providers, the Internet and the private intranet (col. 5/line 30 to col. 6/line 15), wherein a network interface is provided between network controlling elements, such as Base Station controllers, of the wireless communication network, i.e., a mobile switching center or MSC acts as a primary controllers in controlling the routing of mobile nodes or mobile stations within networks with the use of IP router as network interface (col. 6/lines 15-29); and the network interfaces allows various communication channels established by the mobile to be routed to network controlling elements that are coupled to the various data networks (col. 6/lines 38-65). Thus, a mobile station or a mobile node is able to communicate simultaneously with different data networks; and the network interface further allows handoffs or handovers to be executed seamlessly with no interruptions between mobile and system equipment, i.e., even roaming to foreign communication systems based on home or local registration at a home network, or namely, a host system (Figs. 35-37; and col. 46/line 49 to col. 47/line 59).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Schloemer et al (US Patent 5,793,842) & Ahmed et al (US Patent 6,160,804) & Brownrigg et al (US Patent 6,044,062) disclose wireless network communication system with handoffs or routing. Art Unit: 2684

5. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

or faxed to:

(703) 872-9314, (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tony Thuan Nguyen whose telephone number is (703) 308-5860. The examiner can normally be reached on Monday-Friday from 9:00 AM to 6:00 PM, with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel Hunter, can be reached at (703) 308-6732.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the **Technology Center 2600 Customer Service Office** whose telephone number is **(703) 306-0377**.
